

Network of Japanese and Overseas factory

SUMMARY

We build up a Network system connecting a Japanese office and an overseas factory. This system streamlines production control and factory management. It also helps improve the productivity and the business situation of a company.

OUR SERVICES

1. With our services, you can control and monitor overseas facilities from Japanese based office.
2. Our original soft and hard ware products, which are design on the basis of your requirements, are introduced to both your Japanese office and an overseas factory at the same time. This enables you to build up a stabilized network between your overseas factory and your local office.
3. You can share the same data with overseas factory in the aspect of maximizing efficiency, improving productivity and reducing communication expenses.
4. We provide regular technical support services to our clients so that you can maintain efficient condition in the application of our system into your facility.
5. Please refer to the following FIGURE to understand this system structure.
